# PALUDICULTURE POTENTIAL

## What is going on and missing!

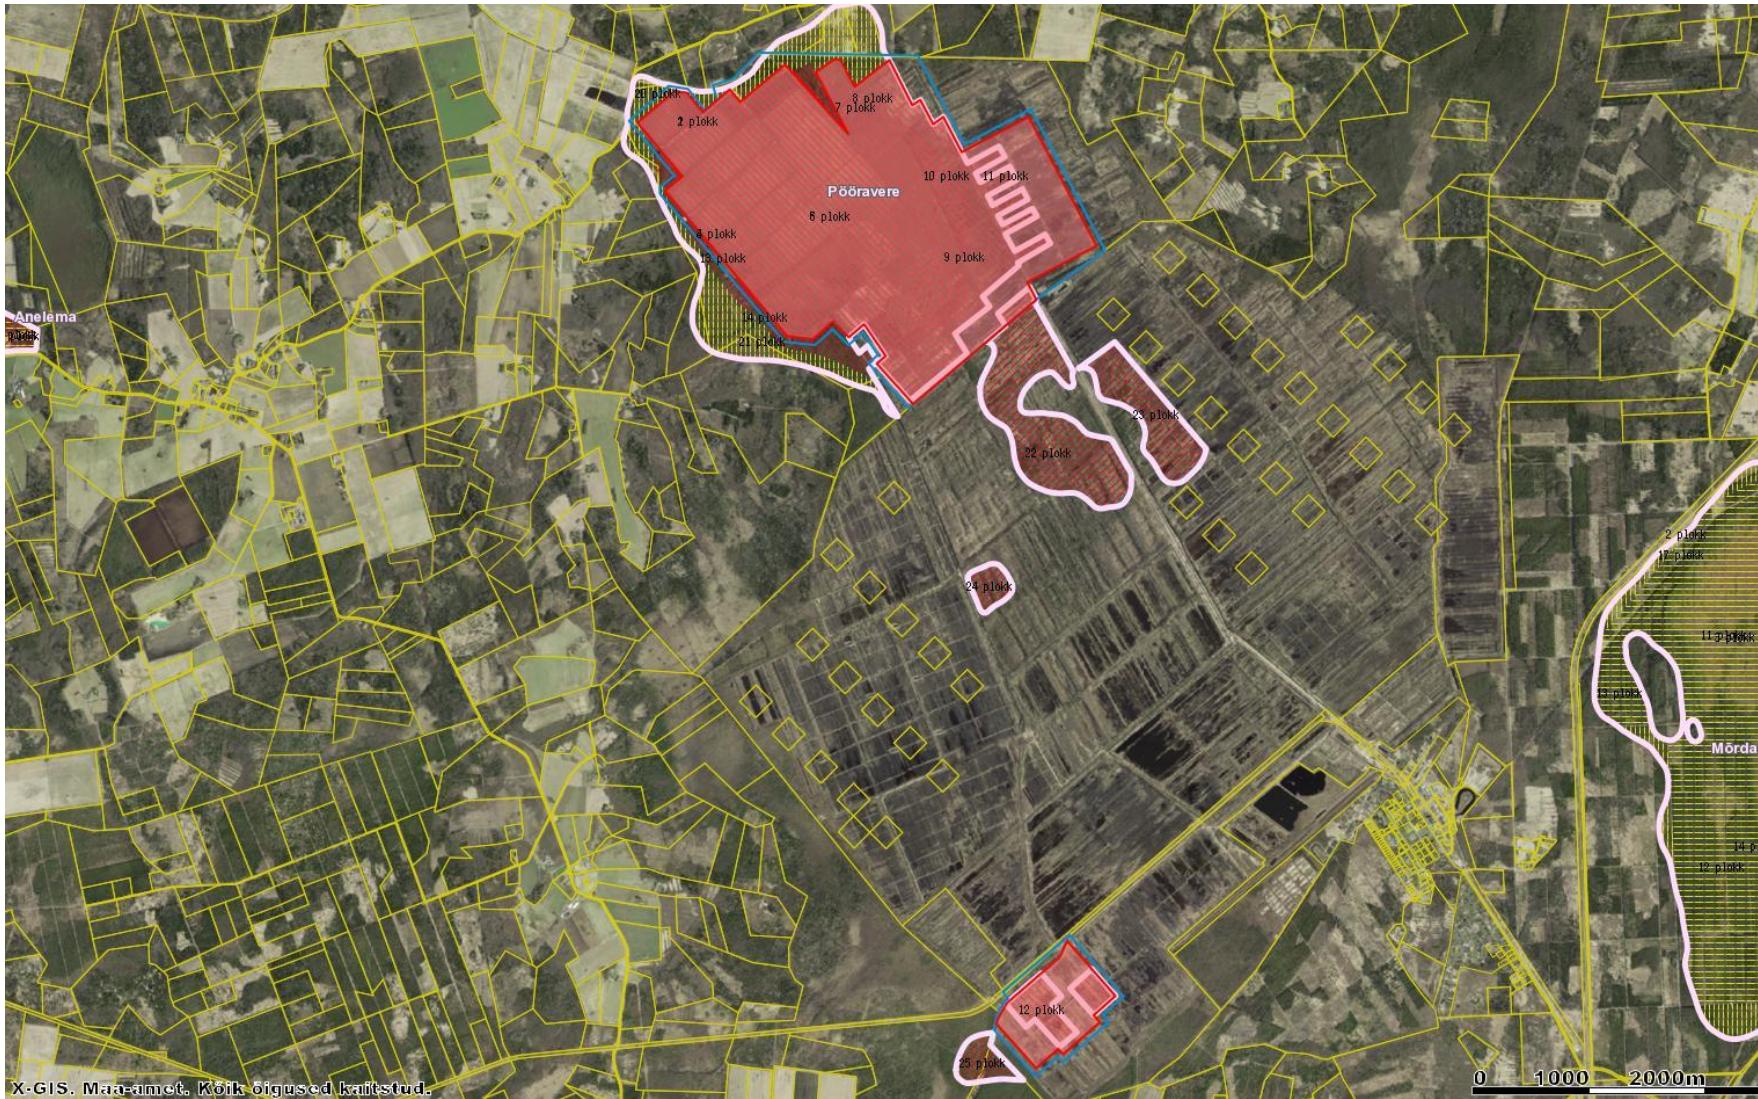

- **New CAP – Paludiculture included!** National measures debated
- Existing regional soil protection support
- Renewal of soil map and planning the use of peatlands
- Monitoring GHG emissions and EFs based on Estonian data
- Paludiculture pilots to estimate productivity, profitability, GHG balance....
- 2010-2020 renewal and reconstruction of drainage systems on ~42 000 ha of peatlands on state
- Mire ecosystem restoration on 20 000 ha by 2020.'

How public money and under which criteria is used in context of peatlands

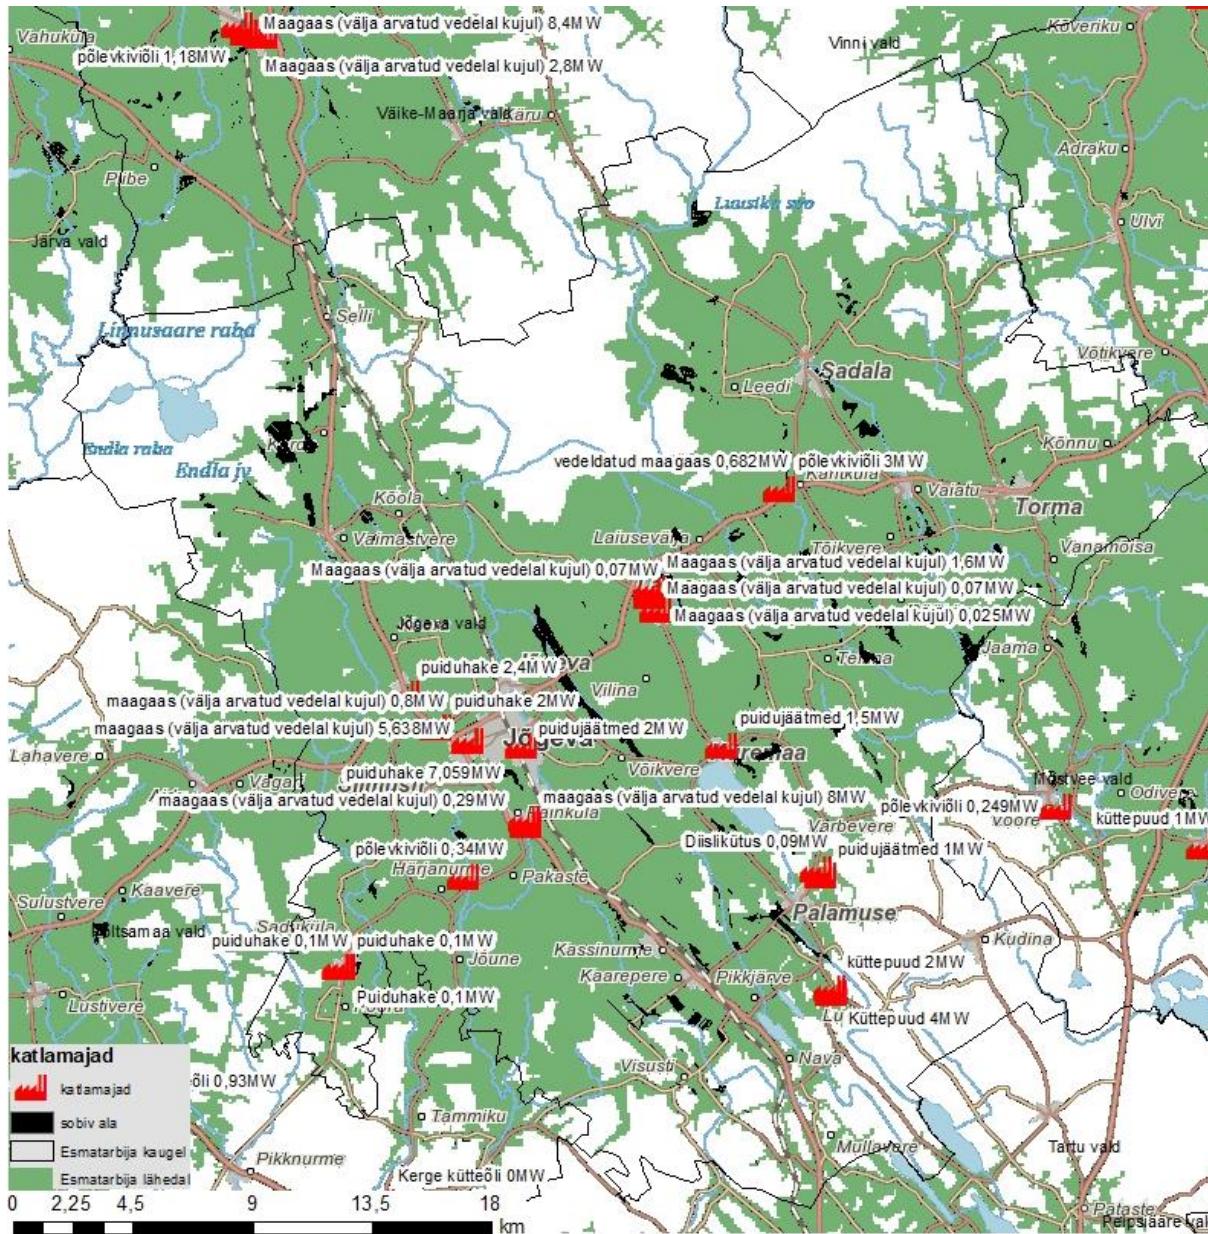

# PALUDICULTURE

What is good!

- **EU climate targets supported by Estonia**
- Climate Policy until 2050 of Estonia
- Amelioration Act allows to close drainage systems
- Support for management of wet seminatural habitats
- We still have intact mires in Estonia!

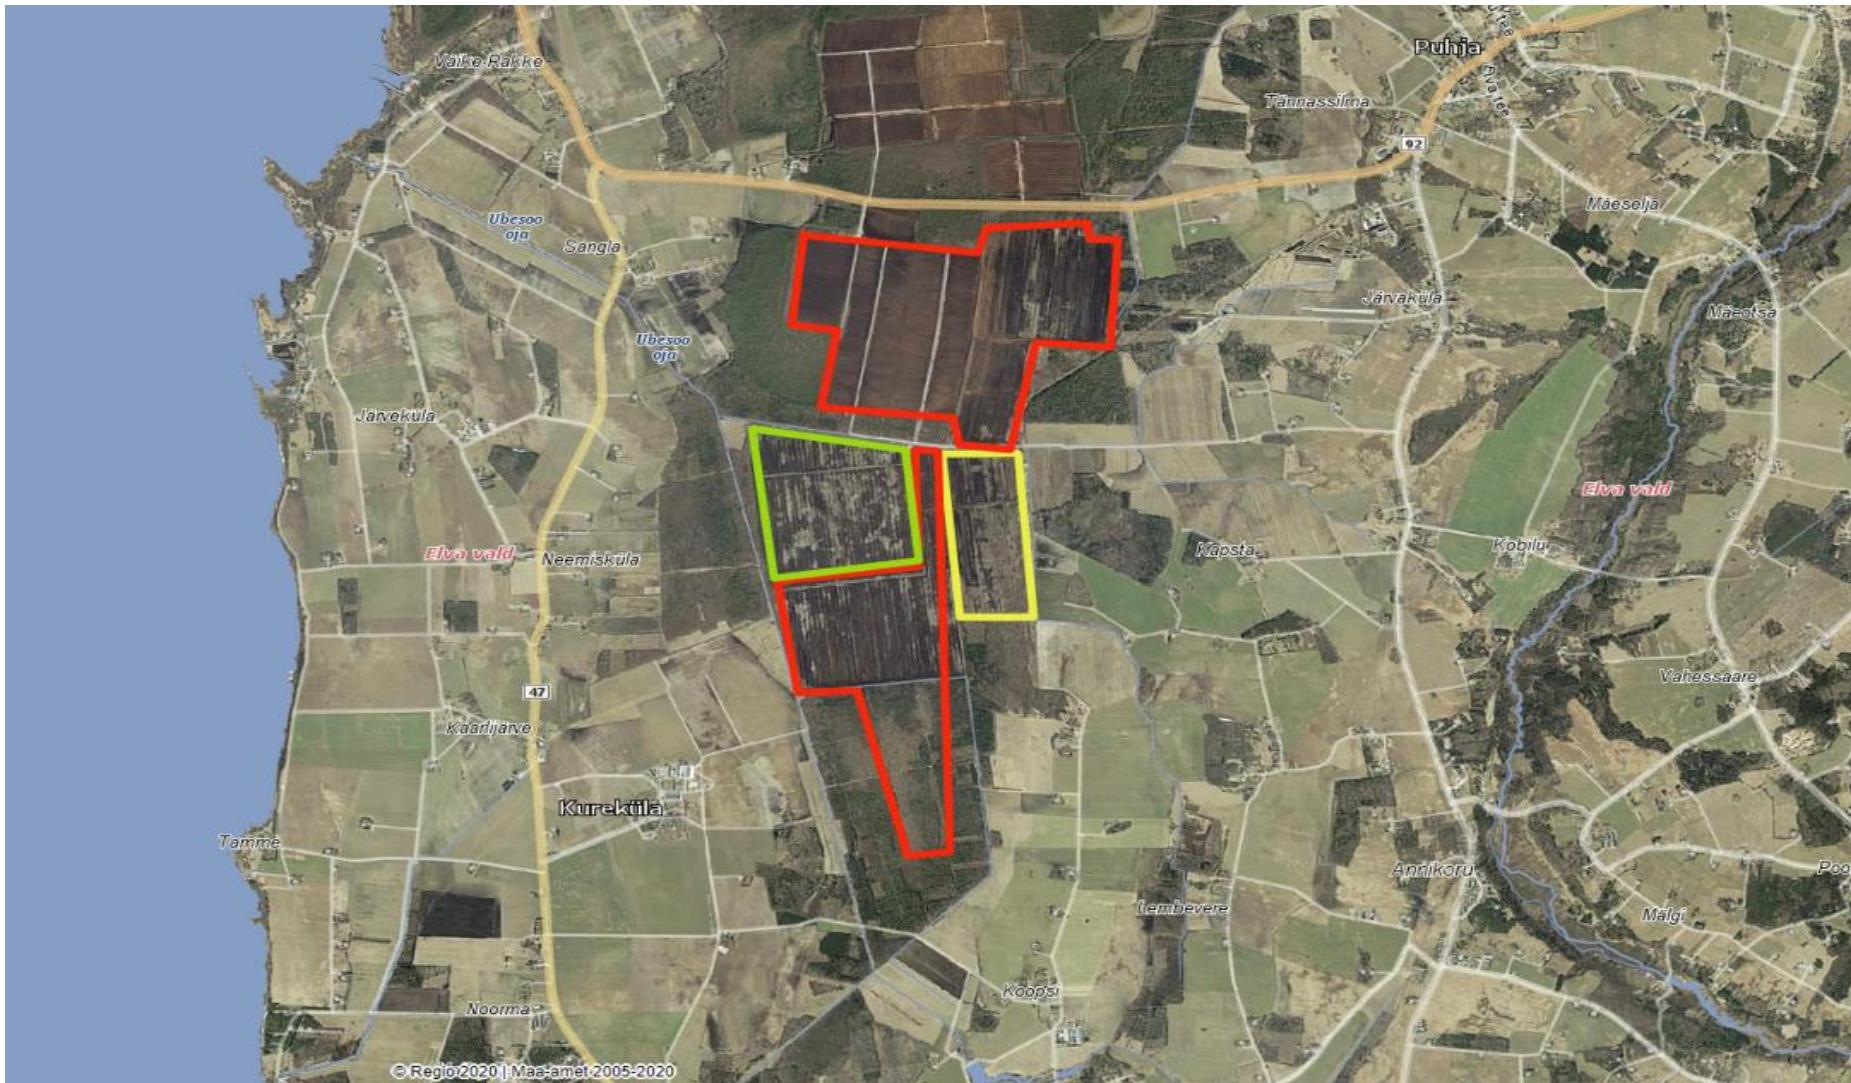

**Põõravere abandoned peat mining area ca 3000 ha, CO<sub>2</sub> emissions 7500 kuni 48 000 t y-1**

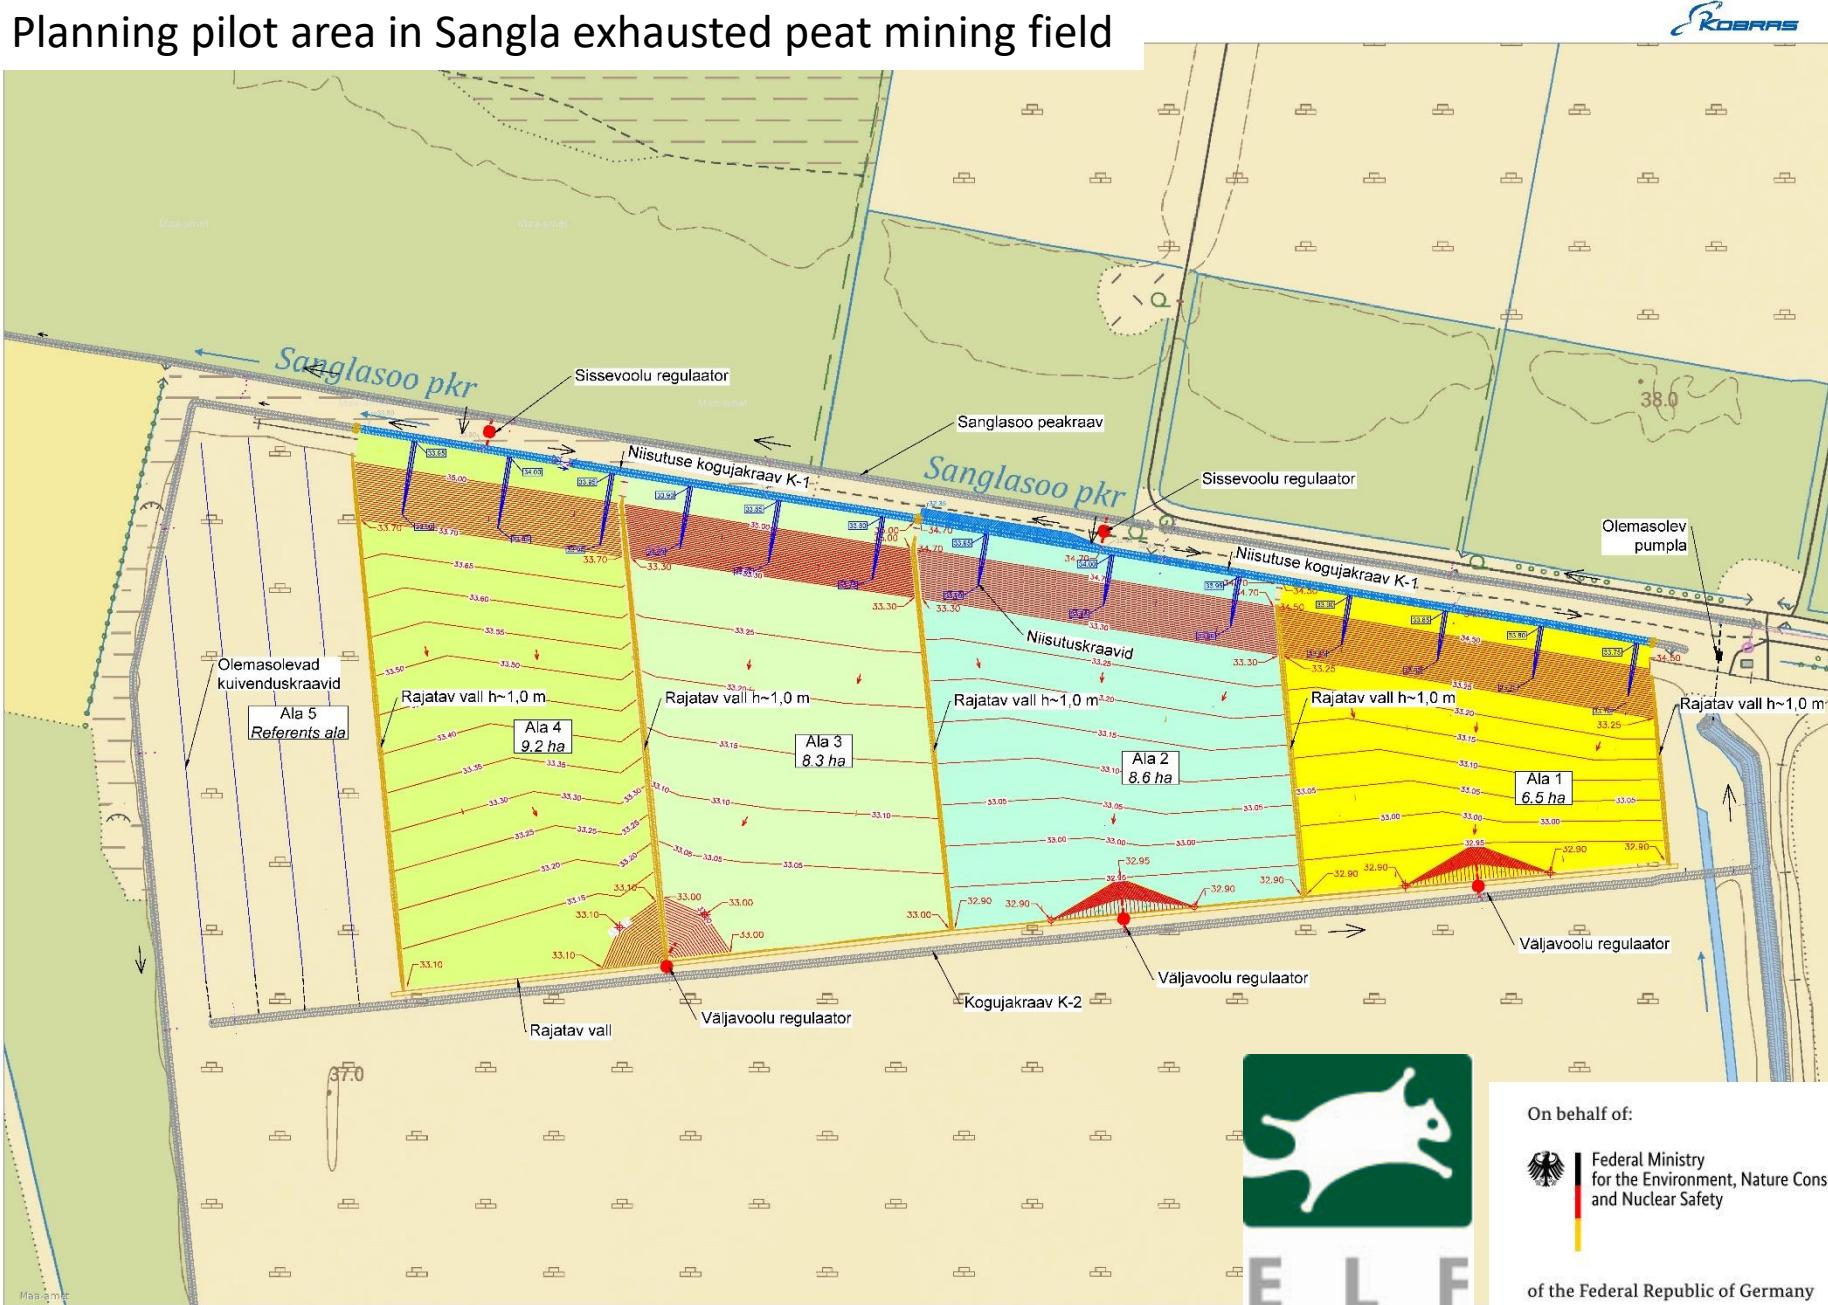

Potential usage of biomass for heating from wet meadows. K. Piirimäe 2019

## Planning pilot area in Sangla exhausted peat mining field

Sangla peat mining area at the Eastern shoreline of Lake Võrtsjärv, green line surrounds potential paludiculture pilot area, yellow line – forested area, red line – mining area (existing and future sites).

# Planning pilot area in Sangla exhausted peat mining field

Potential trials at Sangla:

- Grassland
- Salix sp.
- *Typha, Phragmites*
- *Betula* sp.
- Different grasses
